WATT CENTER INNOVATION FORUM 2017

ATLANTA, GA – On April 12, 2017, Scientific Research Corporation, founding partner of the Watt Family Innovation Center, was represented by Chief Engineer Dr. John Schwacke at the Watt Center Innovation Forum 2017. Dr. Schwacke presented the company's perspectives on disruptive technologies, global markets, dealing with uncertainty, and educating the workforce to meet 21st century challenges. The discussions not only dealt with how collaborations among universities and industries produce disruptive technologies, but also how they help to prepare for disruptions and lessen negative impacts. The event also included a session offering Clemson students the opportunity to engage the presenters in a panel discussion and a question-and-answer session on the characteristics of potential future jobs in an environment of rapidly developing disruptive technologies. The final session of the day provided students the opportunities to interact with industry representatives to investigate job opportunities in their industries during the Career Networking Reception.
